

Save on Transport and Power Tools

Reduce air pollution and save money by switching to electric vehicles and power tools, and by driving fewer miles.

Get information on: EV's, local dealers, incentives, how to maintain your yard with less gasoline and the best ways to recreate and transport publicly.

Make your next car electric

When the electric supply is 100% green, electric cars cause no air pollution and are cheaper to operate and maintain.

Carpool and Public Transit

We have the MTA train stop in both Katonah and Bedford Hills, and the County Bee Line bus system comes through as well.

Bike and Walk

Bedford has several walkable areas. We encourage you to walk and ride your bike whenever possible.

Keep it Local

Air travel is carbon intense. Why not recreate locally? Westchester and its surroundings have a lot to offer.

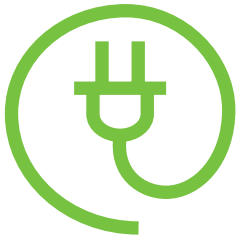

Electrify your Tools

Gasoline powered yard tools are noisy and polluting. Opt for battery powered engines instead. They can do the job just as well

End Idling

Not driving? Turn off your car. It stops polluting emissions, saves gas and shows respect to bystanders. Idling is unlawful in our town.

Plug in to Clean Home Energy

Get information about how your neighbors are reducing energy waste, switching to clean energy solutions, saving money and making their homes healthier.

Learn how we lower energy costs in our public spaces, and how we work together with other towns, organisations and businesses to get affordable, renewable energy in our Town.

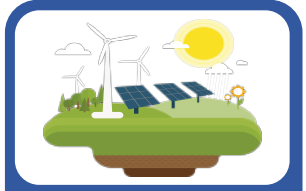

Community Choice Aggregation Get 100% renewable energy through Westchester Power, our town's green electricity program.

Home Energy Audit Sign up for free or reduced cost home energy assessment, get cozy, efficient and save on your energy bills.

Solarize Partnership Learn how working together can save on the costs of renewable energy.

Community Solar Save up to 10% on your electricity bill and support the growth of locally generated clean, renewable energy.

Get a Heatpump or Geothermal Adopt clean and green heating and cooling. Reduce the use of fossil fuels in your home.

Use Batteries Store energy and get clean and quiet power during an outage instead of a gas or propane generator.
